EXPERIENCE

Software Developer (Sole Developer)

2025 – Present

Mini Diosa, Children's Clothing Brand

Buenos Aires, Argentina

- Designed, built, and deployed **Warp** end-to-end as sole developer — a production inventory + **point-of-sale** platform that unifies stock across three sales channels on one shared pool, eliminating cross-channel overselling; live on **Render**
- Built the frontend in **React 18** + **TypeScript** + **Tailwind** + shadcn/ui (migrated from vanilla JS at full parity); designed a **REST API** and **PostgreSQL** data model with transactional writes and a full movement audit trail
- Engineered bidirectional real-time **stock sync** with **HMAC-verified webhooks**, and integrated the **Claude API** for AI-assisted copy, translation, and a natural-language **tool-use** store assistant
- Delivered a full POS/cash flow (register sessions, returns, store credit, Z-reports) plus sales & inventory **analytics** with PDF export

Software Developer · IT Team

Mar. 2025 – Jul. 2025

CEITBA, Student Center at ITBA

Buenos Aires, Argentina

- Built full-stack features for an academic scheduling platform (**Live**) serving **7,000+** students in a cross-functional team of **4**: **TypeScript/React** frontend views and backend endpoints over the official course **REST API**
- Owned the majority of frontend development on the CEITBA student mobile app (**Flutter/Dart**, **Firebase**) and led a codebase refactor that improved structure and contributor onboarding
- Worked in an **agile** cycle with sprint planning, **code reviews**, and **Git**-based iterative releases to a live product

PROJECTS

Podium: Podcast Recommendation Platform | *Java, Spring Boot, Hibernate/JPA, PostgreSQL* | [Live](#)

- Full-stack platform with a social layer (follow friends, discover podcasts from your network) on a **REST API** with **Hibernate/JPA** over **PostgreSQL**; recommendation engine via **cosine similarity**, backed by **100+** JUnit tests

Cloud Provider Analytics: Data Pipeline | *Python, PySpark, Spark Structured Streaming, Cassandra* | [GitHub](#)

- End-to-end **Python** pipeline over a medallion data lake with batch and **streaming** layers (watermarking, dedupe, checkpointing), data-quality rules, and idempotent upserts into a **Cassandra** serving layer

Distributed Data Pipeline | *Java, Hazelcast MapReduce, SQL* | [GitHub](#) | Team of 3

- Processed **20M+** NYC taxi records using distributed **MapReduce**, achieving an **86%** reduction in processing time by optimizing data partitioning and serialization across nodes

x86-64 Unix-like OS Kernel | *C, x86-64 Assembly* | [GitHub](#) | Team of 3

- Built a Unix-like kernel from scratch: preemptive scheduler, memory allocators, named-pipe IPC, and semaphore synchronization with deadlock-prevention testing

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Java, C, SQL, Dart, HTML/CSS

Frontend: React, Next.js, Tailwind, shadcn/ui, Flutter

Backend & APIs: FastAPI, Node.js, Express, Spring Boot, REST APIs

Databases & Data: PostgreSQL, SQLite, Cassandra; PySpark, Spark Structured Streaming, ETL

AI: LLM/Claude API integration & tool-use; coursework in neural networks, CNNs, transformers

Foundations: Data structures & algorithms, distributed systems, cryptography & security, testing, Clean Code/SOLID

Tools: Git, Docker, Render, Linux/Unix, Maven

Languages (spoken): Spanish (native), English (native), Korean (native)

EDUCATION

Instituto Tecnológico de Buenos Aires (ITBA)

Expected Dec. 2027

Bachelor's Degree in Computer Engineering

GPA: 7.65 / 10

- Relevant coursework:** Data Structures & Algorithms · Databases I & II · Distributed Systems · Operating Systems · Computer Networks · Software Engineering I & II · Cryptography & Security · Discrete Mathematics · Compilers · AI Systems
- Competed in **IEEE Xtreme 18.0**, a 24-hour international team programming competition (Oct. 2024)
